GraderGent Analysis Report

Submission: add.c | Problem: add_two_integers | Score: 52.3/100

Rule	Category	Status	Score	Feedback
correctness	Correctness	FAIL	0	0/10 tests pass. First failure: Test 01 (wrong answer).
syntax	Code quality	WARNING	80	2 warning(s) with '-Wall -Wextra -std=c11'.
structure	Code quality	WARNING	80	0 limit violation(s), 2 cppcheck finding(s).
modularity	Code quality	FAIL	30	Only main defined; no helper functions.
logical	Correctness	FAIL	0	0/10 edge cases pass. Fails: Edge case 'negatives' #1 (input '-5 -7').
complexity	Performance	PASS	100	Estimated O(1); required O(1).
memory_safety	Safety	PASS	100	Clean under -fsanitize=address,undefined on 16 input(s).
readability	Review	FAIL	33	3/10 (heuristic: comments, name length, line length).
originality	Review	PASS	100	Max similarity 0.10 (threshold 0.85), not flagged.

Flags

- static_sanity: has_reader is false
- static_sanity: has_writer is false
- llm_unavailable: extra counter-tests skipped
- llm_unavailable: readability scored by heuristic (Ollama is not reachable)
